TARIFF FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 4 and 5 would be 4.1.
- B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 4 cancels the 3rd revised Page 4.
- C. Paragraph Numbering Sequence - There are five levels of paragraph coding. Each level of coding is subservient to its next higher level:
 - 2
 - 2.1
 - 2.1.1
 - 2.1.1.(A)
 - 2.1.1.(A).1
- D. Check Sheets - When a tariff filing is made with the Commission, an updated check sheet accompanies the tariff filing. The check sheet lists the pages contained in the tariff, with a cross-reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision.

3.1 - GENERAL

3.1.1 Rates and timing of calls may vary by product type, time of day, day of week, call mileage, access method, terminating area, or call duration. Calls are billed individually and on a monthly basis. Usage is billed in arrears.

3.1.2 Intrastate services are offered in conjunction with interstate services.

3.2 - TIMING OF CALLS

3.2.1 Billing for calls placed over the network is based in part on the duration of the call as follows, unless otherwise specified in this tariff:

- (A) Call timing begins when the called party answers the call (i.e., when two way communications are established). Answer detection is based on standard industry answer detection methods, including hardware and software answer detection.
- (B) Chargeable time for calls ends when one of the parties disconnects from the call.
- (C) Minimum call duration periods for billing purposes vary by service option.
- (D) For billing purposes, usage after the initial period varies by service and is specified by service in this tariff.
- (E) The Company will not bill for unanswered calls. When a Customer indicates that he/she was billed for an incomplete call, the Company will reasonably

issue credit for the call.

3.3 - CALCULATION OF DISTANCE ("V&H")

Usage charges for all mileage-sensitive products are based on the airline distance between serving wire centers associated with the originating and terminating points of the call.

The service wire centers of a call are determined by the area codes and exchanges of the origination and destination points.

The distance between the wire center of the Customer's equipment and that of the destination point is calculated by using the vertical ("V") and horizontal ("H") coordinates found in Bellcore's V&H Tape and NECA FCC Tariff No. 4.

Step 1 - Obtain the "V" and "H" coordinates for the wire centers serving the Customer and the destination point.

Step 2 - Obtain the difference between the "V" coordinate of each of the wire centers. Obtain the difference between the "H" coordinates.

Step 3 - Square the differences obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the wire centers.
